Quantum-assisted computing will be the first step towards full quantum systems, and will cause immense disruption of our traditional networks. For example, representing the state of an  $n$ -qubit system on a classical computer requires the storage of  $2^n$  complex coefficients, while to characterize the state of a classical  $n$ -bit system it is sufficient to provide the values of the  $n$  bits, that is, only  $n$  numbers. Bernstein, Johannes Buchmann, Erik Dahmen editors.
