Supramolecular polymers | Nature

Supramolecular polymers are a kind of polymers whose monomeric units hold together via highly directional and reversible non-covalent interactions.

Metallo-Supramolecular Polymers - Pritzker School of Molecular Engineering

Supramolecular polymers are polymeric objects that spontaneously arise in solutions or melts from one or more types of molecular building block that can range.

Supramolecular Polymer Chemistry

Abstract: Supramolecular polymers are promising candidates for the use in supramolecular polymers in biomedical applications, such as drug deliver systems.

Structure to Function in Supramolecular Polymers and Materials.

Supramolecular polymers, where hydrogen bonds are the only force keeping the monomers together, form materials whose (mechanical).

Grupo de Investigación Supramolecular Polymers

Using molecular self-assembly we build supramolecular polymers that derive their functionality from responsivity to molecular or mechanical stimuli and from.
