More information about this seller Contact this seller 3. A complementary report is drafted that covers the state-of-the-art on solar tools in education. For smaller facilities in mild climates with a modest freeze threat, passive direct or indirect systems are also a viable option. This map does not account for any available financial incentives. Felix A. In order to reduce radiant losses from the collector, the absorber plate is often treated with a black nickel selective surface, which has a high absorptivity in the short-wave solar spectrum, but a low-emissivity in the long-wave thermal spectrum. Add to Wish List. Product details Format Hardback pages Dimensions x x Warehouse Deals Open-Box Discounts. Active systems have a ΔT temperature drain-back configuration has the added advantage of protecting the system from excessive temperatures if hot water consumption is reduced due to seasonal use patterns, remodeling, or vacations. Also, it is important to optimize the tilt of the collecting array.
