Thielen, A. One of these numerical models—the Global Forecast System model—is run more than once, and sometimes several times, per set of input data in what is called an ensemble approach.

It seemsthatyou'reinGermany.Clickheretobuythisbookinprintordownload. For example, inputs for convective storms might include such parameters as precipitable water amounts in various categories, the mb steering-level wind speed, the existence of a cap on a stable layer aloft i. In order to evaluate the forecasting tools, scientists need observations of flash flooding. Flashfloodingislikelytooccur.Because rainfall patterns often move across an area rather than develop locally, measurements from Doppler radars such as NEXRAD generally are the most valuable information for monitoring approaching rainstorms.
